Our STORY

NECTOR TECHNOLOGIES is a group of researchers who have come together to support the digitization of Africa through change leading projects. This has been seen by our impact in the projects

VISION

To catalyse a new era in African connectivity and technology, driving positive change, economic growth, awareness, and global competitiveness.

MISSION

To empower individuals and communities across Africa through innovative and accessible technology solutions, fostering connectivity, knowledge, and sustainable development.

OBJECTIVES

Innovation and Versatility in Technology Solutions: Commit to continuous innovation in developing technology solutions

Empowering Communities Through Accessible Technology

Sustainable Development and Social Impact:

Creating an inclusive technology is key.

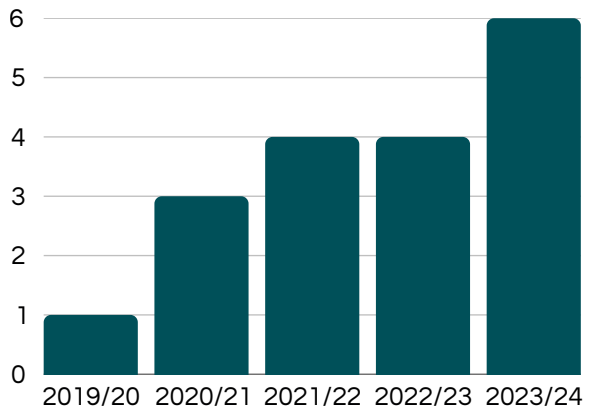

CUSTOMER SATISFACTION *Rating*

The client is at the heart of everything we do, and we have the data to prove it

Since 2019, we have worked on many projects from software development, to research projects in Artificial Intelligence.

These Projects range from Web Applications, Mobile Applications, Embedded Systems and Desktop Systems.

We have done good research in the AI field from Language translation, Report generation, image Analysis, OCR scanning for organization digitization of records and AI funded projects in the health discipline

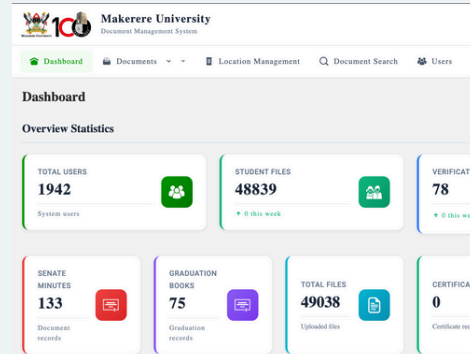

Projects worked on over time

Our LEAD PROJECTS BY OUR TEAM

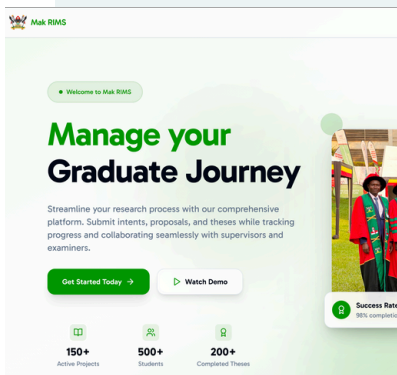

Academic Records Management System

A system to manage academic records of Makerere University to digitize the academic records of Makerere University. It supports Academic documents verification and certification

Graudate Research Information Management System

A graduate Research Information Management System for Makerere University that monitors the entire research cycle for Makerere University.

Our LEAD PROJECTS BY OUR TEAM

PPI.ORG

A not-for-profit agency established as a platform for public policy research, analysis and engagements. PPI's ideological foundation is a locally contextualized 'Doing Development Differently' (3D) agenda, which applies a locally led political economy analysis for quality evidence frameworks across government and development partners' policy and research work.

MakAdvance

Makerere' endowment has its origins in the 1930's when the University received donations from individuals with the main objective of establishing an investment portfolio to support the University.

stories behind them*

Our PROCESS

1

Meeting our clients

Priority is given to understanding our client needs. We send in our experts in the requirements elicitation phase, to draft the business processes of interest and remodel them to a complete requirements specification that details the clients needs.

2

Designing the Product

Once requirements are agreed upon, we then draft the designs and with our clients agree on the designs that will be included in their product, their flows, scope and infrastructural requirement. At this level a client has a complete conceptual overview of the product

3

Developing and Implementation

During this phase the client is involved in the development of the product and tests are run together with the client until client satisfaction is reached. The client's product is deployed and support is provided for the agreed period of time.

Meet OUR TOP TEAM

Mary Nsabagwa (Phd)

She holds a Phd in Systems and is our main lead on projects and also a system analyst. She is also a Senior Lecturer at Makerere University.

Joshua Muhumuza (Msc Computer Science)

He is our lead tech and has a vast experience from Artificial Intelligence to systems development.

Cosmas Wamozo (Msc Computer Scientist)

He is our lead Front end and AI engineer on systems. Holds a key eye on the intuitiveness of our projects

Conrad Suuna (Msc Computer Science)

He is our lead Systems Quality Assurance Engineer on projects ensuring that each project meets the requirements provided by the client

David Gaamua (Msc in IT)

Our infrastructure engineer. The brain behind the infrastructure of our projects ensuring they seamlessly run without fail

Ben Wycliff Mugalu (Msc Computer Science)

Our lead Backend engineer in charge of ensuring the kitchen of the systems works perfectly and beyond as required

More projects in the pipeline.
